

Improve hygiene and reduce breakage

Versatile containers for the food industry

Strong containers and built to last

Like all Saeplast containers, the new Saeplast 500L and 630L PE containers are ergonomically designed for maximum strength and ease of handling. PE refers to the polyethylene construction of the outer walls that are bonded to the PE core of the container. The PE plastic is triple-layered, making this the strongest container on the market. The Closed Cell Core design does not absorb liquid, optimizing hygiene and the safety of your products.

The robust triple-wall design yields longer durability and reduces long term costs. The ergonomically designed one-piece construction facilitates easy cleaning and sanitation. The Saeplast PE containers are fully recyclable and designed to meet the toughest demands of any environment.

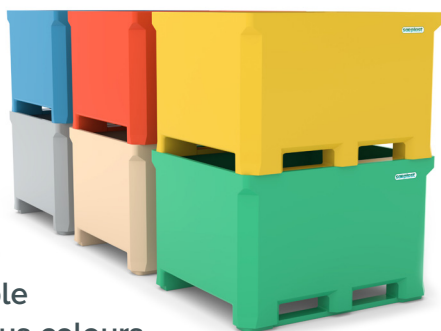

Saeplast offers a standard range of features, such as an imprinted serial number for ready product identification and traceability of your product which can be equipped with Radio Frequency Identification (RFID) tags, with customer barcodes or QR-codes.

Available in various colours

The new 500L and 630L PE containers are available in various standard colours. Specific colours can be ordered for volume purchases. Colours are ideal for factory segregation and differentiating various waste streams such as CAT3, food grade and waste.

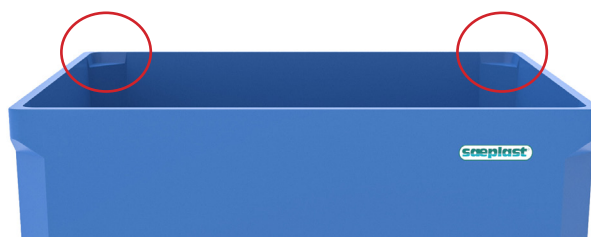

Tracking solutions

Mould-In RFID/Barcode/QR are available on all our containers. Because of the flat and smooth design of the new Saeplast 500 and the 630L PE the RFID/Barcode/QR label is placed on opposite corners of the container. This allows easy access to the labels, see figure above.

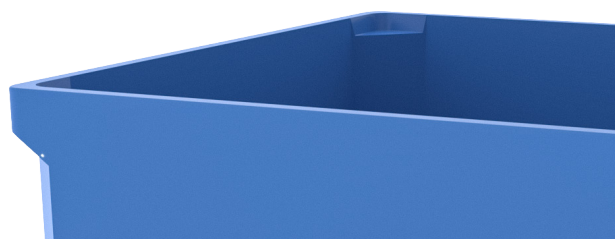

500 PE		PE CONTAINERS
Dimensions	External	Internal
	cm	cm
Length	120	115,5
Width	80	75,5
Height	76	58,5
Weight: kg	Box: 42	
Volume	Litres 498	

Available with lid

Strong inner stacking

Both 500L and the 630L PE containers feature a strong and durable inner stacking solution. This means stacking is stable and safe!

Smooth design

Due to the smooth design, cleaning the containers and keeping them sanitised has never been easier. The inner core will not absorb liquid, thus extending the containers lifetime and optimizing hygiene.

630 PE		PE CONTAINERS
Dimensions	External	Internal
	cm	cm
